

# SEMANTIC TECHNOLOGY

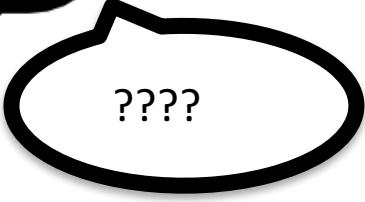

What problems are we trying to solve?

Short answer: We need to effectively automate the processes of finding, exchanging, disseminating and working with data.

Controlled Vocabularies  
Ontologies  
Reasoning Engines(?)

# Add meaning and:

World Wide Web →  
Semantic Web

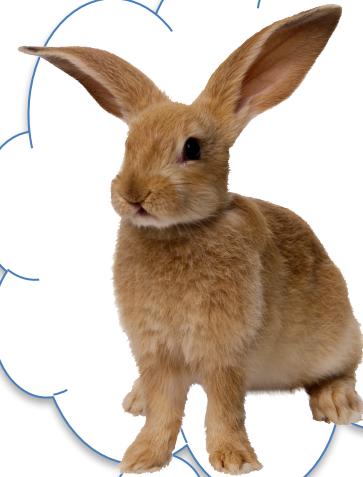

“The Web can reach its full potential only if it becomes a place where data can be shared and processed by automated tools as well as by people.” <https://www.w3.org/2001/sw/Activity>

Linked Data →  
Meaningfully Linked Data

Search →  
Intelligent Search

Statistical Analyses →  
Entity Recognition,  
Classification Systems

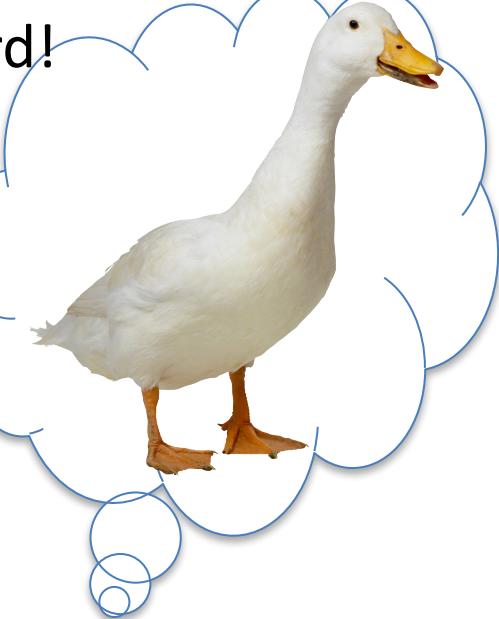

# Getting there has proven to be hard!

Computational Semantics

# Where to go from here?

Urge everyone to think about semantics in terms of the big picture:

How do we overcome the current barriers to success:

- Adoption
- Scalability
- Integration

# How do we bring semantics to bear on real-life use cases?
